

JAYDEEP INGLE

DISTRIBUTED SYSTEMS | CLOUD & AI INFRASTRUCTURE | TECHNICAL LEADERSHIP
Redmond, WA | (607) 338-8487 | inglejaydeep@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Technical leader with **10+ years** architecting distributed cloud infrastructure and control-plane services at **Oracle, Amazon, and VMware**. Leads platform modernization, cross-service integration, reliability, and security across GPU, bare-metal, and cloud fleets, combining hands-on Java/Python depth with a record of simplifying architectures and improving release velocity.

CORE EXPERTISE

Architecture & Technical Leadership: Platform architecture, control-plane services, cross-service integration, workflow orchestration, service ownership, operational excellence

Cloud & AI Infrastructure: AWS, OCI, GPU/bare-metal provisioning, fleet health, firmware, SmartNIC/NVMe automation

Distributed Systems & Backend: Microservices, event-driven systems (SQS/SNS), REST APIs, service-to-service authentication, Spring Boot, Django, Node.js

Reliability, Security & Delivery: Terraform, CloudFormation/CDK, Docker, CI/CD, observability, TLS/PKI, private DNS

Languages, Data & Engineering Tools: Java, Python, TypeScript/JavaScript, Shell, DynamoDB, MySQL, MongoDB, CorfuDB, Elasticsearch, JUnit, Mockito, Maven, Bazel, Git

EXPERIENCE

Oracle – OCI AI Infrastructure

Senior Member of Technical Staff

Seattle, WA

Mar 2026 – Present

- Led the architecture and delivery of onboarding for **six mission-critical host-provisioning services** into an isolated cloud environment, defining federated identity, least-privilege authorization, TLS, private DNS, secret management, and Terraform-based deployment orchestration; achieved healthy releases across **21/21 nodes** while preserving existing-region behavior.
- Established cross-service hardware validation and failure propagation for **GPU fleet provisioning**, reconciling physical NVMe models and serials with inventory metadata and routing precise firmware, GPU package, and GB switch failures to accountable owners.
- Re-architected a state-transition workflow that exceeded **40 minutes**, batching transitions and job lookups to reduce SLA-driven terminations and delivering a bulk host-status API for downstream control-plane automation.

Amazon – AWS

Software Development Engineer II

Seattle, WA

Jan 2025 – Jan 2026

- Strengthened Amazon Connect compliance and data integrity by consolidating redundant **GDPR deletion workflows** with AWS Step Functions, retiring a service/API, and adding phone-number release validation that prevented dangling queue associations and reduced database inconsistencies.
- Improved deployment throughput by **25%** by stabilizing integration tests and modernizing TypeScript/CDK CI/CD approval workflows.
- Designed a decoupled configuration architecture using **dual-write Lambdas and dedicated control/data-plane services**, reducing latency and removing a single point of failure.
- Eliminated throttling for large customer inventories by designing a **DynamoDB-backed quota cache** that removed redundant reads.

VMware by Broadcom

Senior Software Engineer

Bellevue, WA

Jun 2022 – Jan 2025

- Designed and delivered **Spring APIs for the NSX VC plugin** to automate Transport Node and Host Switch installation on ESXi hosts.
- Expanded production diagnostics by extending Python and Shell support-bundle tooling, accelerating debugging and incident resolution.

Oracle – OCI

Senior Member of Technical Staff

Seattle, WA

Oct 2019 – Jun 2022

- Designed **Python/Flask services and end-to-end cloud automation** for server, motherboard, and rack asset management, parsing Microsoft Visio diagrams and synchronizing network/rack topology into a React/TypeScript/D3.js operations UI.
- Improved application load performance **5x** by integrating an optimized backend API.

RootMetrics by IHS Markit

Software Developer (Full-Stack)

Bellevue, WA

Sep 2018 – Oct 2019

- Delivered Angular/Django analytics and React/Express agent-monitoring tools for carrier-network field testing.

Globant

Software Engineer

Pune, India

Aug 2014 – Jul 2016

- Designed and built a multi-tenant **J2EE/Spring MVC and Backbone.js SaaS platform** for SDN/NFV orchestration, virtual-machine provisioning, high availability, VNF, vCPE, branch-security, and SD-WAN deployment workflows.
- Mentored four undergraduate contributors, accelerating product ramp-up and delivery.

EDUCATION

State University of New York at Binghamton (SUNY)

Master of Science in Computer Science

GPA: 3.56/4.00

Aug 2016 – May 2018

College of Engineering Pune (COEP)

Bachelor of Technology in Computer Engineering

GPA: 3.60/4.00

Jul 2011 – May 2014
