

JAYDEEP INGLE

AI & CLOUD INFRASTRUCTURE | DISTRIBUTED SYSTEMS | TECHNICAL LEADERSHIP

Redmond, WA | (607) 338-8487 | inglejaydeep@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Software engineer and technical leader with 10+ years building cloud infrastructure at **Oracle, AWS, and VMware**. Hands-on Java/Python expertise in GPU provisioning, fleet validation, control planes, and secure service integration.

CORE EXPERTISE

Cloud & Compute: AWS, OCI, Kubernetes, Docker, GPU/bare-metal provisioning, fleet health

Systems & Hardware: Control-plane services, workflow orchestration, firmware, SmartNIC/NVMe automation

Reliability & Delivery: Terraform, CloudFormation/CDK, CI/CD, observability, TLS/PKI, private DNS

Languages & Data: Java, Python, Go, TypeScript/JavaScript, Shell, DynamoDB, MySQL, MongoDB

Backend: REST APIs, microservices, SQS/SNS, Step Functions, CorfuDB, Elasticsearch

Technical Leadership: Platform architecture, cross-service integration, service ownership, operational excellence

EXPERIENCE

Oracle – OCI AI Infrastructure

Seattle, WA

Senior Member of Technical Staff

Mar 2026 – Present

- Drove HoPS onboarding into HERDS for independent new-region testing, resolving identity, permission, certificate, and configuration blockers. Successfully deployed **six applications across 21 application nodes**; validated existing-region compatibility through **eight R1 application deployments** and a complete server-provisioning run.
- Strengthened **GPU provisioning reliability** through SSD inventory validation, precise firmware/GPU failure reporting, and switch-failure routing to the responsible team. Subsequent validation showed GB300 servers reaching **READY/ALLOCATED** and production tickets reaching the intended owner.
- Led state-transition nanny enhancements to address provisioning timeouts from slow job scheduling using batching, bulk queries, parallel processing, and incremental job launches. Observed **approximately 50% lower runtime** in one regional comparison; processed **63 provisioning attempts in under two minutes**, versus four to five minutes previously.

Amazon – AWS

Seattle, WA

Software Development Engineer II

Jan 2025 – Jan 2026

- Designed a decoupled configuration architecture using **dual-write Lambdas and dedicated control/data-plane services**, reducing latency and removing a single point of failure.
- Improved deployment throughput by **25%** by stabilizing integration tests and modernizing TypeScript/CDK CI/CD approval workflows.
- Eliminated throttling for large inventories using a **DynamoDB quota cache**, removing redundant reads.
- Consolidated Amazon Connect **GDPR deletion workflows** with AWS Step Functions, retiring a service/API; added phone-number release validation to prevent dangling queue associations and reduce database inconsistencies.

VMware by Broadcom

Bellevue, WA

Senior Software Engineer

Jun 2022 – Jan 2025

- Built **Spring APIs for the NSX VC plugin** to automate Transport Node and Host Switch installation on ESXi.
- Extended Python/Shell support-bundle tooling to improve production diagnostics and accelerate incident resolution.

Oracle – OCI

Seattle, WA

Senior Member of Technical Staff

Oct 2019 – Jun 2022

- Built **Python/Flask services and cloud automation** for server, motherboard, and rack asset management, synchronizing network/rack topology from Visio diagrams into a React/TypeScript/D3.js operations UI.
- Improved application load performance **5x** by integrating an optimized backend API.

RootMetrics by IHS Markit

Bellevue, WA

Software Developer (Full-Stack)

Sep 2018 – Oct 2019

- Built an Angular/Django portal for field-test analytics, charts, and tabular reporting.
- Developed React/Express tooling to monitor distributed agents collecting carrier-network data.

Globant

Pune, India

Software Engineer

Aug 2014 – Jul 2016

- Built a multi-tenant **J2EE/Spring MVC SaaS platform** for SDN/NFV orchestration, VM provisioning, high availability, and SD-WAN deployment.
- Mentored four undergraduate contributors, accelerating product ramp-up and delivery.

EDUCATION

M.S., Computer Science – Binghamton University (SUNY)

May 2018

B.Tech., Computer Engineering – College of Engineering Pune (COEP)

May 2014
